White Paper Abstract

This document establishes a cryptographic **Proof of Existence** and formal commitment to the *Munkstrup 10-Year Bitcoin Dollar-Cost Averaging (DCA) Strategy*. To ensure complete transparency and prevent retrofitted authorship or hindsight bias, this white paper pre-registers the strategic execution framework prior to the first deposit.

The strategy mandates exactly 120 consecutive monthly deposits extending into 2037. All future transaction entries will be executed exclusively through the designated public Bitcoin wallet address: **bc1qcejy8mpjd5yprekekavv8kz6fvnj74hqmu7nxk**. The target public wallet framework and its scheduled cryptographic ledger entries have been embedded transparently at www.munkstrup.com. By anchoring the **SHA-256 cryptographic hash** of this certificate into the Bitcoin blockchain via an immutable timestamp, we provide public, mathematical verification that this strategy was conceived, finalized, and locked on the date of issuance, establishing an indisputable chain of authenticity for all future portfolio track records.
